

ZENITH ECLIPSE JOURNAL

FLAXSEED

From seed to specification.

Brown and golden flaxseed for a defined purpose. Connect colour, condition and analytical detail with your ingredient or crushing requirement.

THE COVER STORY

Choose the seed around your application
Compare oil results on the same basis
Bring quality and delivery into one brief

03

SELECT YOUR SEEDS

Choose by end use and product form.

04

READ THE QUALITY

Match the tests to your requirements.

06

CONNECT THE ROUTE

Align the cargo contract with delivery.

THE ZENITH ECLIPSE APPROACH

Let the application lead.

A bakery ingredient, a pressing input and a feed material need different answers from the same small seed.

BUILT AROUND YOUR END USE

Zenith Eclipse reviews flaxseed enquiries for food ingredients, oil crushing, feed manufacturing and wholesale packing. Tell us the receiving process and intended use so the product description serves the purchase.

Brown and golden describe seed-coat colour. Neither colour establishes grade, composition or application suitability. Keep appearance, form, quality limits and the required food, feed or crushing designation as distinct parts of the brief.

Oilseed comparisons become more useful when methods and moisture bases match. Agree sample approval, inspection and the delivery point, then confirm the offered origin, crop year and availability in writing.

PRODUCT PORTFOLIO

Colour and purpose belong together.

Brown and golden are colour choices. Food, crushing and feed are application routes that need their own acceptance criteria.

01 Brown flaxseed

Whole brown seed for the agreed application. Confirm appearance, grade basis, cleanliness and condition. Select with the buyer's sample and specification rather than a colour name alone.

02 Golden flaxseed

Yellow or golden seed selected for a required appearance and use. Agree contrasting-colour limits and the reference sample. Verify composition separately when it matters to the process.

03 Food-use seed

For bakery, cereal, packing and ingredient programmes. Define the whole or processed form, hygiene controls, testing and packing requirements. Agree any preparation or production trial needed for approval.

04 Crushing input

Whole seed assessed for the chosen pressing or extraction process. Agree oil content, reporting basis and condition. Specify the edible or technical oil route; the finished oil has its own acceptance requirements.

05 Feed-designated seed

Whole or processed seed under a dedicated feed description. Specify composition, processing needs and destination requirements; confirm suitability within the buyer's programme.

THE BUYER'S QUALITY GUIDE

Read the seed. Align the tests.

A clear method and reporting basis give each result commercial meaning. Agree representative sampling before comparing lots.

PARAMETER	WHAT THE BUYER SHOULD CHECK
Identity & colour	State brown or golden, required form and intended use. Agree contrasting colours and reference appearance independently from the governing grade or private specification.
Oil & composition	Agree oil method and moisture basis. Where relevant, request the fatty-acid profile or iodine value. Laboratory oil content is distinct from the yield achieved by the buyer's plant.
Moisture	Set the analytical method, reporting basis and contract maximum. Specify the sampling point and how the result will be used for acceptance or commercial adjustments.
Cleanliness	Define dockage, other seeds, stones and foreign material under the agreed procedure. Align the results with any further cleaning the receiving operation will perform.
Seed condition	Review broken, heated, sprouted and other damaged seed, plus odour and infestation. Agree the applicable definitions, limits and inspection point for the intended use.
Use-specific testing	Set the food or feed safety panel for the destination and application. For processed forms, define composition and storage requirements separately; a whole-seed grade cannot describe every finished form.

A colour choice is only the beginning.

PACKING & RECEIVING

Keep small seed under control.

Match the package to the seed form and choose handling around the receiver's equipment.

01

SACKS / WAREHOUSE

Sacks for distribution

Specify material, liner, net weight, closure and labels. Use clear lot and application marks; agree palletization or floor loading with the warehouse receiving plan.

02

BIG BAGS / PROCESSOR

Big bags for intake

Match lifting, discharge and capacity to the plant. Confirm a suitable liner and closure for the offered form, with handling requirements recorded before loading.

03

BULK / CARGO PLAN

Seed-tight bulk formats

Review lined containers or suitable bulk equipment against origin and destination capability. Check seed-tightness, cleanliness, payload and the agreed unloading arrangements.

Plan handling from the receiver backwards.

Whole and ground material need different packing assessments. If a processed form is requested, agree its barrier, storage and shelf-life requirements as part of the offer. For repeat orders, share intake dates and storage limits. A consistent packing instruction supports clear lot identity and practical receiving.

Connect the seed with the shipment.

Keep the intended use, agreed specification and cargo identity clear from approval to arrival.

OCEAN

ROAD

RAIL

MULTIMODAL

Share the seed form, quantity, loading format, shipment window and destination with the freight enquiry. Coordinate the product approval, inspection and booking sequence around the receiver's production plan.

01 Define the delivery point

State the Incoterms® 2020 rule and exact named port or place. Match the rule to the actual handover and agree carriage, insurance and destination-service responsibilities.

02 Set the document matrix

Agree commercial, packing and transport records, origin evidence and contracted analysis or inspection reports. Check destination plant-health conditions, including certificates and declarations where required.

03 Keep the lot identifiable

Align approval, cargo release, loading and document deadlines. Preserve the agreed use designation and lot reference through storage, transfer and shipment records, then confirm the receiving checks.

PROCUREMENT WORKSHEET

Start with a stronger flaxseed RFQ.

Give product, quality and freight teams one clear brief. These eight details help make quotations comparable.

YOUR FLAXSEED ENQUIRY / EIGHT DETAILS

- ☐ Intended food, feed, edible-oil or technical-oil application
- ☐ Brown or golden colour, whole or processed form and sample
- ☐ Grade or buyer specification, condition and purity limits
- ☐ Oil or composition requirements, test methods and reporting bases
- ☐ Use-specific safety tests and required acceptance evidence
- ☐ Quantity, packing, labels and recurring-order requirements
- ☐ Named destination, Incoterms® rule and shipment window
- ☐ Sampling, inspection, documents and final acceptance procedure

Still defining the specification?

Begin with the intended use, form, quantity and destination when the specification is still developing. Separate essential limits from appearance preferences. For crushing, ask for oil results on the agreed moisture basis. For ingredient use, identify the preparation or process trial needed before approval.
