

ZENITH ECLIPSE JOURNAL

RAPESEED MEAL

Identity. Process. Precision.

A purchasing guide for professional feed manufacturers. Verify rapeseed or canola identity, read the process and analytical basis, then connect the ingredient with delivery.

THE COVER STORY

Put seed identity in the specification.
Compare glucosinolates on a declared basis.
Link lot approval with the feed mill's intake.

03

SELECT YOUR MEAL

Choose by end use and product form.

04

READ THE QUALITY

Match the tests to your requirements.

06

CONNECT THE ROUTE

Align the cargo contract with delivery.

THE ZENITH ECLIPSE APPROACH

Make the identity explicit.

Rapeseed meal, verified canola meal and mechanically pressed cake need a clear product description before prices can be compared.

BUILT AROUND YOUR END USE

We review rapeseed meal enquiries for compound-feed manufacturers, ingredient blenders, importers and distributors. Share the intended animal class and the receiving nutritionist's ingredient requirements at the start.

Canola is a quality-defined identity linked to low erucic acid and glucosinolates under the applicable definition. A rapeseed meal offer does not acquire that designation automatically. State the required identity and the evidence supporting it.

Next, separate oil-removal process from physical presentation. Meal, expeller and pellets can carry different buying questions. Bring the lot analysis, processing declaration and delivery brief together so our team can confirm the proposed commercial scope.

IN THIS EDITION

- 03** Select the ingredient route
- 04** Put a basis beside results
- 05** Receive the required form
- 06** Connect the meal and route
- 07** Build the rapeseed meal RFQ
- 08** Talk to our team

PRODUCT PORTFOLIO

Select the ingredient route.

A seed identity, an extraction method and a physical form answer different questions.
Keep all three visible in the offer.

01 Extracted rapeseed meal

Rapeseed-derived material with solvent or prepress-solvent extraction identified. Agree the composition, heat-treatment declaration and physical form. Add identity and chemistry requirements needed for the intended use.

02 Verified canola meal

Use the canola designation when the governing identity criteria and lot evidence support it. Specify glucosinolate analytes and basis, plus erucic-acid evidence where the definition or destination requires it.

03 Expeller or cake

Mechanically pressed rapeseed material, quoted separately from extracted meal. Check the producer's process, residual oil, composition and physical condition. Compare the actual lot against the formulation requirements.

04 Ground meal

Specify fine or standard particle distribution, oversize and fines tolerance for the feed plant. Grinding describes presentation; the underlying seed identity, extraction and analytical limits remain part of the brief.

05 Pelleted meal

Densified meal for an agreed handling system. Retain the seed and extraction identity while declaring pellet dimensions, fines, processing aids and composition limits.

THE BUYER'S QUALITY GUIDE

Put a basis beside results.

Chemistry is useful when the tested material, units, method and reporting basis are clearly stated.

PARAMETER	WHAT THE BUYER SHOULD CHECK
Identity & process	Record rapeseed or verified canola, botanical identity and oil-removal route. Include the processing declaration. Confirm erucic-acid evidence on the oil fatty-acid basis when the designation requires it.
Glucosinolates	Specify the analytes, maximum, method and units such as $\mu\text{mol/g}$. State whether the material basis is whole meal, dry matter or oil-free material; avoid comparing unlike bases.
Protein & processing	Agree protein method, minimum and moisture basis. Your nutritionist may request amino-acid or processing-quality evidence. Heat history matters; a protein percentage alone does not establish usable protein quality.
Fibre, oil & moisture	Name the fibre measure and fat method, with contract limits and moisture basis. Keep as-received moisture available. A mechanically pressed route does not establish a fixed residual-oil result.
Physical condition	Agree particle profile or pellet dimensions, fines and foreign-material acceptance. Inspect odour, heating and caking. Include ash or other measurements where the formulation brief needs them.
Sampling & safety	Define representative sampling, retained samples and acceptance rules. Agree the relevant feed-safety panel for origin, process and destination. Match all results and declarations to the lot offered.

A name needs evidence. A result needs a basis.

PACKING & RECEIVING

Receive the form you specify.

Keep the contracted identity through packing and transfer, while matching the cargo to the feed mill's handling equipment.

01

BULK / MILL INTAKE

Bulk meal or pellets

Tell us the intake method, silo capacity and unloading limits. Review the feasible loading route and material form together. Agree cargo condition checks, protection and receiving records.

02

CONTAINER / HANDOVER

Suitable containers

Confirm loose, lined or bagged loading, payload and discharge requirements. Align transport cleanliness and previous-cargo compatibility with the ingredient brief, and retain lot and seal references.

03

BAGS / WAREHOUSE

Bags & big bags

Specify net weight, closure, lifting, discharge and label needs. Include the meal particle profile or pellet fines limit. Confirm pack availability for the offered origin, process and quantity.

Keep identity with the material.

Include the planned storage period and receiving checks in the enquiry. Keep rapeseed, canola and process-specific lots identifiable through each transfer. The written offer confirms the physical form, packaging and loading configuration. Share recurring intake dates when the purchase supports a production programme.

Connect approval with arrival.

Align product evidence, commercial responsibilities and cargo milestones with the feed mill's intake schedule.

OCEAN

ROAD

RAIL

MULTIMODAL

We review meal and freight requirements together. Share the contracted identity, extraction process, form, volume and receiving place. An agreed arrival plan should account for the time needed to approve the nominated lot.

01 Define the handover

Name the Incoterms® 2020 rule and exact port or place. Agree the loading, carriage, insurance and destination scope so the offered price reflects the same delivery responsibilities.

02 Make evidence travel

Set the lot COA, seed-identity evidence and process declaration alongside origin, weight and transport records. Check destination feed-import and health requirements, then confirm document issuers, formats and timing.

03 Coordinate release and receipt

Connect sample approval, inspection, cargo readiness and document deadlines. Confirm the cargo declaration and applicable transport requirements. Agree receiving appointments, lot checks and the procedure for a disputed result.

PROCUREMENT WORKSHEET

Build your rapeseed meal RFQ.

Put these eight details into one brief for the commercial, formulation, laboratory and freight teams.

YOUR RAPESEED MEAL ENQUIRY / EIGHT DETAILS

- ☐ Animal species and class, feed application and approval steps
- ☐ Rapeseed or verified canola identity and governing definition
- ☐ Solvent / prepress-solvent meal or mechanical expeller / cake
- ☐ Protein, named fibre, residual oil and moisture limits and bases
- ☐ Glucosinolate analytes, units, method, basis and required identity tests
- ☐ Particle or pellet profile, quantity, pack and intake requirements
- ☐ Destination, Incoterms® rule and delivery or shipment window
- ☐ Sampling, retesting, safety panel and required documents

Still defining the specification?

Begin with identity, process, intended feed use, volume and destination if the specification is developing. Share the laboratory evidence your nutritionist needs. Flag essential chemistry and sample approvals. We will confirm the proposed product, analytical scope and shipment terms in writing.

YOUR NEXT RAPESEED MEAL PURCHASE

Your product. Your requirements.

Let's connect the details.

Share the rapeseed or canola identity, extraction route, analysis limits, physical form, volume and destination. Our team will review your enquiry and confirm the applicable product and delivery scope.
